Interactive and stylized desert scene on URP

April. 2024

- Performed Tessellation algorithm based on camera distance by setting the Hull shader and Domain shader, and set noise map as displacement to make vertex offset.
- Use RenderTexture, particle system, and orthographic camera to track character movement, and move vertices with the guide of normal.
- Support multiple lights, casting and receiving shadows. Realized the sparkle effect on the sand by sampling the noise map.

Character ToonShader on URP and Built-in Rendering Pipeline

Mar. 2024

- Built the outline feature which uses the normal expansion algorithm, and uses a Normal Smoothing algorithm to smooth the outline.
- Use stencil buffer and render object to control rendering order, and implement the external outline.
- Implement multi-level shadows based on the Lambert lighting model, supporting ramp map and shadow map, built ramp map texture generation tool in Unity.
